California Chassis Awarded AS9100 Revision B Certification

Anaheim, California – June 20, 2008 – California Chassis, a global manufacturer of telecommunications and network operations center racks, enclosures, and cabinets, was awarded the Certificate of Registration to AS9100 Revision B, as a certified aerospace industry supplier, by Moody International Certification, Inc. This certification is added to their existing ISO 9001:2000 certification.

The aerospace industry demands safety, quality, and reliability in its components and assemblies. AS9100 certification ensures stringent manufacturing controls and legislation are followed within the aerospace industry's entire supply chain.

According to David Kohl, Senior Vice President, "Our new aerospace certification strengthens our fabrication process and our dedication to providing the highest quality solutions for network operations facilities." Kohl adds, "We pride ourselves on our commitment to our business partners and customers through our process of Operational Excellence."

California Chassis is a fully integrated manufacturer providing engineering, custom sheet metal fabrication, wire harnesses, and electromechanical assembly products and services. Additionally, California Chassis provides a secure network for sensitive material and a certified staff of engineers and material technicians, including certified welding for sensitive and intricate fabrications and custom builds.

Sales Manager, William Doyle comments, "Our customers in the aerospace industry asked us to become AS9100 certified, and we responded immediately, knowing that it was necessary to meet their needs for sustainable quality." Doyle continues, "We are certain that this certification will enhance our customer relationships and reinforce their confidence in us for providing consistent quality products and service."
